

```

import org.junit.jupiter.api.Test;
public class Animal {
    //creating objects in class
    private String name;
    private int age;
    private String color;
    private double weight;
    //setting

    public Animal(String name, int age, String color, double weight) {
        this.name = name;
        this.age = age;
        this.color = color;
        this.weight = weight;
    } //creating my objects

    //checking validation
    public boolean isValid() {
        return name != null && !name.isBlank()
            && color != null && !color.isBlank()
            && age > 0.1 && weight > 0.1;
    } //end of is valid
    //setting name to getName
    // Getters and setters

    //creating getters
    public String getName() {
        return name;
    } //end of name
    //setting Name to getName
    public int getAge() {
        return age;
    } //end of age
    //setting age to get age.
    public String getColor() {
        return color;
    } //end of color
    //same thing
    public double getWeight() {
        return weight;
    } //end of weight

```

```

//same thing here setting weight to getWeight
//attaching class variable to object
//creating setters

public void setName(String name) {
    this.name = name;
} //end of name
//same
public void setAge(int age) {
    this.age = age;
} //end of age
//same
public void setColor(String color) {
    this.color = color;
} //end of color
//same
public void setWeight(double weight) {
    this.weight = weight;
} //end of weight

//creating basic to string to be overridden for specific animals.
@Override
public String toString() {
    return name + "," + age + "," + color + "," + weight + "," + getClass().getSimpleName();
} //end of to string
public String makeSound(){
    return "I am a " + name + " and I make the sound ";
}
} //end of make sound

```
